DSS ScanBay™ Device Recovery Software Operating Instructions

This document provides instructions for using the Device Recovery Software to recover the programming on a handheld diagnostic tool using DSS ScanBay.

Using the Device Recovery Software

Once the Device Recovery Software is installed on your PC, use the following procedure to recover the programming on a handheld diagnostic tool.

To use the software:

1. Connect the programmable media to be recovered, CF card or cartridge, to your PC.
2. Double click the Device Recovery shortcut on your PC desktop (Figure 1).

Figure 1 *Desktop shortcut*

3. Enter your DSS Key when prompted then select **Login** (Figure 2).
